Office Action Summary

DETAILED ACTION***Specification***

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: There is a lack of support in the specification for a drawn portion of the sleeve, the first and second bands connected together to form a continuous strip, an additional strip of elastic material forming the pocket, the first and second compression bands being connected to an opposite edge of the pocket and the attachment element at the junction of the first and second end portion of the flexible elastic material.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 23-28 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. It is not clear as to what the first and second band are. It is not clear how each of the bands is connected to an opposite edge of the pocket. It is not clear how the first and second bands are formed as one continuous strip. It is not clear as to what the additional sheet of elastic material is in reference to.

Art Unit: 3764

Claims 24-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 24, it is not clear if the attachment element is on one end or both ends of the flexible elastic strip. In claim 25, it is not clear how the two flexible elastic bands are connected to an opposite edge of the pocket. In claim 25, it is not clear how the two flexible elastic bands are connected together to form one continuous band. In claim 26, it is not clear how the fastening means is on both sides of the flexible elastic bands. In claim 28, it is not clear how the first and second compression bands are formed of a common continuous strip of elastic material. In claim 28, it is not clear as to what the additional strip is in reference to.
